It's your home...
why risk it?

Agenda

EC25

Manufactured by
Bayer Environmental Sciences

BAYER

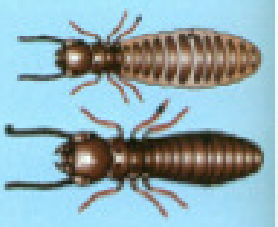

Agenda *EC25*

Agenda *EC25* is well known brand manufactured by Bayer Environmental Sciences for anti termites in pre and post construction stages. **Agenda** *EC25* belongs to new chemical group of Phenyl Pyrazole and carries 25-grm/liter of the Fipronil as active ingredient.

Pakistan poses a very favorable climate for termites (except for the harsh winters) and the use for wood is also in abundance. Many homeowners face the sad reality that if deteriorating weather wouldn't take wood fixtures apart, then termites will. Moreover the preventive measures fall short of any standard to remove termite infestation from your home.

No matter how your home is constructed, where it is located, or how old it is, termites could attack it. They are a threat across 70% of the world. They are in fact, the most serious threat your home may face.

Look Who's Coming to DINNER

King and Queen

The pair of reproductive termites that successfully establishes a new colony is called the king and queen. The queen's sole purpose is to reproduce. Some live for as long as 30 years.

Eggs

Queens can lay thousands of eggs every year. Eggs hatch into larvae which can molt into workers.

Workers

These blind, wingless termites make up the largest caste and are the most likely to be found in infested wood. They build, repair, forage for food, and care for other termites. Workers can molt into soldiers or nymphs.

Nymphs

Nymphs can molt into different castes: workers, primary reproductives, or supplementary reproductives.

Soldiers

Soldiers are sterile, wingless, and blind. Their sole function is to defend the colony.

Winged Reproductives

These termites can leave the colony and swarm to a new location, where they shed their wings and pair up to start new colonies.

Those "Ants" Might be TERMITES

Winged termites are often mistaken for ants. Here's how to tell them apart:

- Winged ants have two pairs of wings and the front pair is larger than the hind pair; both pairs of termite wings will be the same shape and size.
- Ants have elbowed antennae; termites have short, straight, beaded antennae.
- Ants have a distinct constriction between body regions; termites have a gradual constriction.
- Don't be fooled by color or size: ants and termites can vary both in size and color based on species.

Termite

Ant

Agenda *EC25* the way it works

Termites are smart enough to stay well away from anything as deadly to them as Agenda *EC25*... if only they knew it was there. The Agenda *EC25* technology follows with liquid action called non-repellent. This simply means termites cannot see, smell, taste, or avoid it. Instead they contact ingest and share Agenda *EC25* completely unaware, because Agenda *EC25* is intentionally engineered to be slow acting, termites have ample time to spread it throughout their entire population.

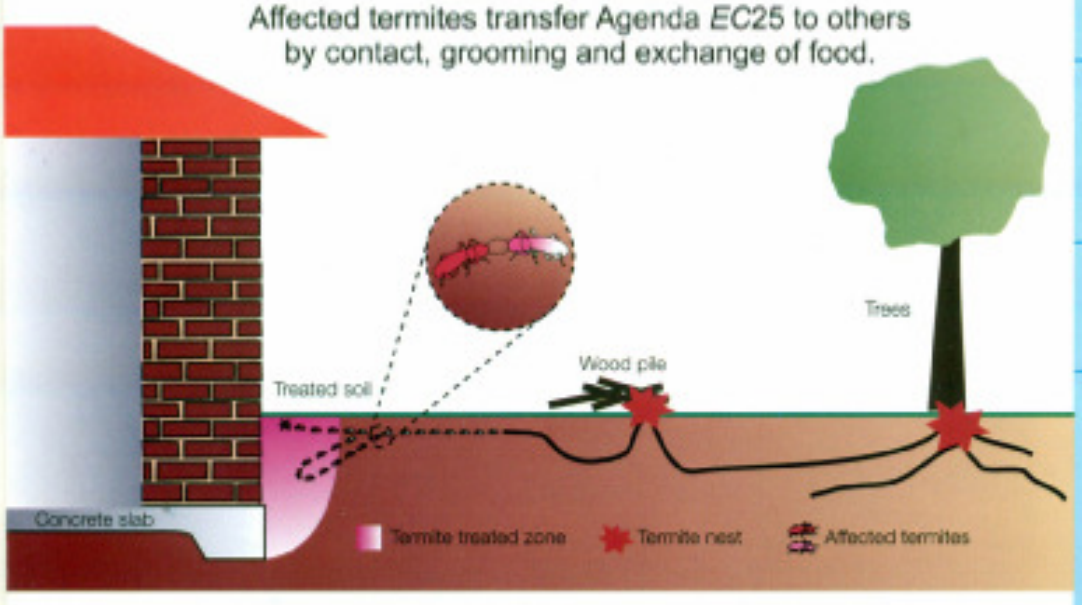

One of the major reasons for the success of Agenda *EC25* lies in the unique "Transfer Effect.™" Termites are social insects that live together in large colonies. They groom and feed each other and are in constant contact as they forage for food and travel through the galleries. Agenda *EC25* takes advantage of these social behaviors. When a single termite comes into contact with Agenda *EC25*, it will unknowingly transfer it back to the colony on its body, infects every termite it contacts on the way, thus infecting termites that have not even been near the Agenda *EC25* treated zone.

This is the "Transfer Effect"™ and it's a key reason why no other termiticide performs as well as Agenda *EC25*. Some older products are repellent and are applied as a barrier. Their job is to keep the termites away instead of killing them, but the problem is these barriers have to be 100% complete with absolutely no gaps, which is almost impossible to achieve. Termites will actively seek gaps in the barrier day after day, year after year until they find a way through.

Agenda *EC25* provides proven protection against all subterranean termite entry and will continue to control termites for at least 10 years throughout the entire country. Agenda *EC25* is World # 1 trusted brand for Termite control and has built its reputation on the "peace of mind" principal for both the pest controller and you.

"Transfer Effect" ™

Affected termites transfer Agenda *EC25* to others by contact, grooming and exchange of food.

JAFFER

Unique Advantages

World #1 termite defense

The unique "Transfer Effect" ™ means affected termites help pass **Agenda** EC25 on to their population before dying themselves.

Starts working immediately, and completely rids homes of termites

None repellent & WHO class formulation

Only **Jaffer Brothers** certified pest control operators can apply **Agenda** EC25

Excellent soil binding properties

The world's most effective termiticide over 15 years of test data proves **unparalleled effectiveness**.

Low-dose treatment, with virtually no odor.

Your pest professional can provide you with additional information about **Agenda** EC25, the application method that's right for you, and how it can protect your home. You can also visit www.jaffer.com/hhd for more information.

Agenda EC25 Direction for use

Mixing Ratio

Agenda *EC25* can be mixed up with water up to 250 liters

Pre-Construction

Spray, shower or flood mixtures 4-5 of solution liters per Sq. meter on:

- Foundation pits
- Foundation at DPC level/ plinth
- Prior to construction of temporary floor
- Between constructed area and outer plot at boundary wall

Post Construction

Drill holes 15-18 inches deep inside and out side the wall at every 2 to 3 feet distance. Inject or pour solution (between 4 to 5 liters) per drilled hole in order to create a barrier inside and around the walls. All holes must be plugged after treatment.
